

## NOTICES OF PUBLIC INFORMATION

Notices of Public Information contain corrections that agencies wish to make to their notices of rulemaking; miscellaneous rulemaking information that does not fit into any other category of notice; and other types of information required by statute to be published in the *Register*. Because of the variety of material that is contained in a Notice of Public Information, the Office of the Secretary of State has not established a specific format for these notices.

### NOTICE OF PUBLIC INFORMATION

#### OFFICE OF THE SECRETARY OF STATE

1. **Title and its heading:** 2, Administration  
**Chapter and its heading:** 12, Office of the Secretary of State  
**Article and its heading:** 9, Business Services - Fax Filings, Fax Filings of Uniform Commercial Code  
**Section number:** R2-12-901
2. **Subject matter of the proposed rules:**  
The initial Notice of Proposed Rulemaking: 7 A.A.R. 112, January 12, 2001, published an incorrect date for the acceptance of oral comments on R2-12-901.  
  
A Public Hearing will be held March 20, 2001, at 9:00 a.m. in the conference room of the Secretary of State, 1700 West Washington, 7th Floor, Phoenix, AZ 85007.
3. **Name and address of agency personnel with whom persons may communicate regarding the rules:**  
Name: Connie Copeland  
Director of Business Services  
  
Address: Office of the Secretary of State  
1700 West Washington, 7th Floor  
Phoenix, Arizona 85007  
  
Telephone: (602) 542-5561  
Fax: (602) 542-7386

### NOTICE OF PUBLIC INFORMATION

*Editor's Note: Pursuant to A.R.S. § 49-287.01(E), the Department of Environmental Quality filed the following Notice with the Office of the Secretary of State on January 26, 2001 for publication in the Arizona Administrative Register.*

#### DEPARTMENT OF ENVIRONMENTAL QUALITY

##### The 2001 Water Quality Assurance Revolving Fund Annual Registry

The Arizona Department of Environmental Quality (ADEQ) is pleased to provide this Annual Report on the location, remedial status, and score of the sites on the Water Quality Assurance Revolving Fund (WQARF) Registry as of December 31, 2000. The Registry includes those sites within the state that pose risk to public health, welfare, or the environment from the release of hazardous substances and for which there is current or planned investigation and cleanup. There are 33 sites on the WQARF Registry: 19 in Maricopa County, eight in Pima County, three in Gila County, one in Graham County, one in La Paz County, and one in Yuma County.

Sites on the Registry are scored based in part upon the type of contamination present, the location of the contamination, and the number of people that may be affected. Scores are used to help determine relative risk at the site and do not necessarily mean that there is direct exposure of contaminants to humans. Whether the site is currently in remediation or in remediation planning, the agency takes steps to identify the contamination and to prevent exposure.

Additional information regarding these sites is available on ADEQ's web site at <http://www.adeq.state.az.us/envIRON/waste/index.html>. The information is also available in the Superfund Programs Section Information Booklet which may be obtained at 3033 N. Central Avenue, Phoenix, or by calling (602) 207-2202 or toll free in Arizona at 1(800) 234-5677, Ext. 2202. Information about Registry sites, meetings, contact information, and other elements of the WQARF Program can also be accessed at the ADEQ's Superfund Information Line at (602) 207-4360, or toll free in Arizona at 1(800) 234-5677, Ext. 4360.

**7th Street and Arizona Avenue** - This site was placed on the WQARF Registry in April 2000. The site is located in Tucson, approximately one-third mile north of Broadway Boulevard and approximately three-fourths mile east of Interstate 10. The site boundary is a northwest-trending oval extending approximately 1,200 feet from the former Oliver's Cleaners facility at 300 E. Seventh Street to approximately 150 feet north of Sixth Street and approximately 100 feet east of Seventh Avenue.

Groundwater in the 7th Street and Arizona Avenue site has been impacted by tetrachloroethylene (PCE), trichloroethylene (TCE), and cis-1,2-dichloroethylene (cis-1,2-DCE) at concentrations exceeding the Arizona Aquifer Water Quality Standards. No drinking water wells have been impacted by the contamination from the site. The site has a score of 40 out of a possible 120.

**16th Street and Camelback Road** - This site was placed on the WQARF Registry in April 1999. The site is approximately bounded by Medlock Drive to the north, Highland Avenue to the south, 17th Street to the east, and 14th Place to the west.

The site is divided into a northern and southern portion. The contaminants of concern at the northern portion of the site include tetrachloroethylene (PCE) and those at the southern portion of the site include 1,2-dichloropropane and 1,2-dichloroethane (1,2-DCA). ADEQ completed installation of one additional monitoring well in May 2000. The purpose of the well was to determine if a historic off-site source may have contributed to the groundwater contamination. The well has been incorporated into the quarterly sampling routine. The site has a score of 23 out of a possible 120.

**20th Street and Factor Avenue** - This site was placed on the WQARF Registry in March 2000. The site is located approximately one-half mile south of 16th Street and approximately three-quarters of a mile east of Fourth Avenue in Yuma. The site boundary is a northwest-trending oval extending approximately 1,000 feet from the Houston International facility at 655 E. 20th Street on the southeast to 19th Street and Rail Avenue on the northwest.

Groundwater in the 20th Street and Factor Avenue site has been impacted by tetrachloroethylene (PCE). ADEQ is conducting investigations to determine whether an early response action is appropriate for this site. The site has a score of 31 out of a possible 120.

**Broadway Pantano** - This site was placed on the WQARF Registry in September 1998. The site is located in the east-central part of Tucson and is bounded approximately by Speedway Boulevard to the north, Pantano Wash to the east, Broadway Boulevard to the south, and Wilmot Road to the west.

Groundwater is approximately 325 feet below the ground surface and is contaminated with tetrachloroethylene (PCE) and trichloroethylene (TCE). The contaminated groundwater is migrating to the west and has already resulted in the closing of four Tucson Water production wells. The major source of the groundwater contamination is the Broadway North Landfill. The City of Tucson and Pima County have installed a soil vapor extraction system to remove and treat contaminated landfill gases which have been determined to be contributing to the groundwater contamination.

A community advisory board has been established for this site. The site has a score of 57 out of a possible 120.

**Central and Camelback** - This site was placed on the WQARF Registry in January 1999. The site is located at the southwest corner of Central Avenue and Camelback Road. The boundaries of the site are approximately oval shaped, reaching north to south from Camelback Road to Mariposa Street, and east to west from a point about 250 feet west of Central Avenue to Central Avenue.

The primary contaminant of concern at the site is tetrachloroethylene (PCE) which is present in the groundwater beneath the surface. There is an underground parking structure near the site, the lower level of which is below the water table. There is a concern that the contaminated groundwater could infiltrate the lower level of the garage, causing a health risk. ADEQ is currently installing groundwater monitoring wells to determine the most appropriate remedial action for the site, which will be some form of hydraulic control of the groundwater contamination plume.

A community advisory board has been established for this site. The site has a score of 32 out of a possible 120.

**East Central Phoenix (ECP) 24th Street and Grand Canal** - This site was placed on the WQARF Registry in May 2000. The boundaries of the site approximate a circle about 400 feet in diameter. The actual center of the circle is approximately 30 feet to the east of 24th Street and 10 feet to the north of the Grand Canal.

Groundwater at the site has been contaminated by tetrachloroethylene (PCE). There is currently no known threat of direct exposure to the public from the contamination at the East Central Phoenix sites. The site has a score of 29 out of a possible 120.

**ECP 32nd Street and Indian School Road** - This site was placed on the WQARF Registry in May 2000. The boundaries of the site approximate a circle about 400 feet in diameter. The actual center of the circle is approximately 300 feet to the east of 32nd Street and 100 feet to the south of Indian School Road.

Groundwater at the site has been contaminated by tetrachloroethylene (PCE). There is currently no known threat of direct exposure to the public from the contamination at the East Central Phoenix sites. The site has a score of 29 out of a possible 120.

**ECP 38th Street and Indian School Road** - This site was placed on the WQARF Registry in September 1998. The site is bounded approximately by Indian School Road to the north, Amelia Avenue to the south, 38th Street to the east, and 36th Street to the west. Groundwater at the site has been contaminated by tetrachloroethylene (PCE), 25-30 feet below the ground surface. The site has a score of 25 out of a possible 120.

**ECP 40th Street and Indian School Road** - This site was placed on the WQARF Registry in September 1998. The site is bounded approximately by a diagonal starting near the intersection of 38th and Monterosa Streets and ending near the intersection of 40th Street and Devonshire Avenue to the north, a diagonal starting near the intersection of 38th Street and Piccadilly Road and ending northeast of the intersection of 40th Street and Indian School Road to the south, 40th Street to the east, and 38th Street to the west. Groundwater at the site has been contaminated by tetrachloroethylene (PCE), 25-30 feet below the ground surface. The site has a score of 25 out of a possible 120.

**ECP 40th Street and Osborn Road** - This site was placed on the WQARF Registry in May 2000. The boundaries of the site approximate a circle about 800 feet in diameter. The actual center of the circle is approximately 400 feet to the west of 40th Street and 50 feet to the south of the Osborn Road.

Groundwater at the site has been contaminated by tetrachloroethylene (PCE). There is currently no known threat of direct exposure to the public from the contamination at the East Central Phoenix sites. The site has a score of 30 out of a possible 120.

**ECP 48th Street and Indian School Road** - This site was placed on the WQARF Registry in March 1999. The site is bounded approximately by a point approximately 400 feet north of Indian School Road to a point 160 feet south of Indian School Road, bounded on the east by 48th Street and on the west by 45th Place.

Groundwater at the site has been contaminated by tetrachloroethylene (PCE). ADEQ has signed a contract with Salt River Project (SRP) to conduct a source control interim remedial action. The site has a score of 32 out of a possible 120.

**East Washington Fluff** - This site was placed on the WQARF Registry in June 1999. The site is located at 433 E. Buckeye Road and is 10 acres in size. The site has been abandoned for approximately 15 years, and contains significant quantities of auto shredder fluff co-mingled with native soils. Contaminants known to exist at the site are lead and PCBs, a substance historically used as an insulator in electronic components. The site also reportedly contains at least two underground storage tanks. A twelve foot fence was installed by ADEQ around the site with the appropriate signs to warn the public that hazardous substances are present at the site.

The site's original score was 22 out of a possible 120. ADEQ has recently re-scored the site, resulting in a new score of 34. A thirty-day public comment period on the new score is currently underway.

**El Camino del Cerro** - This site was placed on the WQARF Registry in August 1998. The site is located in northwest Tucson and is approximately bounded by Rillito River to the north, El Camino del Cerro Road to the south, Shannon Road to the east, and the Santa Cruz River to the west. The landfill occupies approximately 20 acres in the southwest portion of the site area.

The primary contaminants of concern are tetrachloroethylene (PCE), trichloroethylene (TCE), and vinyl chloride in groundwater. A pilot gas remediation system for VOCs and landfill gas (methane) was installed by Pima County and is in place and operating. A community advisory board has been established for this site. The site has a score of 71 out of a possible 120.

A community advisory board has been established for this site in conjunction with the Shannon Road/Rillito Creek site.

**Estes Landfill** - This site was placed on the WQARF Registry in April 1998. The site is located south of the Sky Harbor Airport and is bounded approximately by the Salt River to the north, Magnolia Street to the south, State Route 153 to the east, and 40th Street to the west.

Groundwater beneath the landfill contains vinyl chloride and cis-1,2-dichloroethylene (DCE) (both common to solvent degradation), and traces of other organic compounds and metals. Groundwater contamination from the landfill extends approximately 1/2-mile to the northwest of the landfill. Quarterly monitoring of the groundwater is conducted by ADEQ.

A community advisory board has been established for this site. The site has a score of 50 out of a possible 120.

**Klondyke Tailings** - This site was placed on the WQARF Registry in September 1998. The site is located on the north bank of the Aravaipa Creek, approximately 4.5 miles upstream of the Aravaipa Canyon Wilderness Area in the unincorporated town of Klondyke.

The site is comprised of two piles of mine tailings, the soil between and adjacent to these piles, and the area approximately 50 feet into the stream bed of Aravaipa Creek, directly adjacent to the tailings piles. The site is bounded to the east by Klondyke Road. The contaminants include lead, cadmium, and arsenic. A community advisory board has been established for this site. The site has a score of 69 out of a possible 120.

**Los Reales Landfill** - This site was placed on the WQARF Registry in April 1999. The site is an active municipal sanitary landfill approximately 376 acres in size located in southeast Tucson and has been in operation since 1967. Groundwater samples taken in August 1988 and January 1989 indicated the presence of volatile organic compounds in two groundwater monitor wells in the vicinity of Los Reales Road.

In March 1999, the City of Tucson implemented a groundwater pump and treat system at the site. A portion of the treated water is reinjected into the aquifer and a portion is used for dust control at the landfill. In April 1999, the City identified additional contamination at the landfill, and has completed a passive soil gas survey and additional monitor wells. After the full extent of contamination is determined, the groundwater treatment system will be upscaled to manage treatment of additional contaminated water. The site has a score of 32 out of a possible 120.

**Miracle Mile** - This site was placed on the WQARF Registry in September 1998. The site is located in Tucson and is approximately bounded by Roger Road to the north, Prince Road to the south, Flowing Wells Road to the east, and Bottletree Lane to the west.

Contaminants of concern at the site include trichloroethylene (TCE) and chromium. Quarterly water quality sampling and monthly water level measurements were conducted from May 1999 through September 2000. As part of an Interim Remedial Action, ADEQ is currently reviewing the initial draft of a Water Supply Study describing and evaluating alternatives available to address lost production to Flowing Wells Irrigation District resulting from TCE contamination.

A community advisory board has been established for this site. The site has a score of 62 out of a possible 120.

**Park-Euclid** - This site was placed on the WQARF Registry in April 1999. The site is in Tucson and is approximately bounded by Broadway Boulevard to the north, 14th Street to the south, Santa Rita Avenue to the east, and Euclid Avenue to the west.

Contaminants of concern include diesel fuel and volatile organic compounds (VOCs), primarily tetrachloroethylene (PCE), trichloroethylene (TCE), and 1,1 dichloroethylene (DCE). ADEQ is currently investigating the sources of contamination at the site. Quarterly groundwater sampling and monthly water level measurements began in February 2000.

A community advisory board has been established for this site. The site has a score of 51 out of a possible 120.

**Payson PCE** - This site was placed on the WQARF Registry in April 1998. The site is bounded approximately by Frontier Street to the north, Aero Drive to the south, Beeline Highway to the east, and McLane Road to the west.

The primary contaminant of concern at the site is tetrachloroethylene (PCE) which is in groundwater approximately 60 feet below the ground surface. Successful operation of two groundwater treatment systems began in October 1998 and continues to date. The clean water from these systems is delivered to the Town of Payson. Drinking water is supplied at an approximate rate of 300 gallons per minute. Impacted private well owners who are not connected to the Town of Payson's water supply are supplemented with bottled water by ADEQ as a temporary solution.

A community advisory board, which also incorporates the Tonto and Cherry site, has been established for this site. The site has a score of 63 out of a possible 120.

**Pinal Creek** - This site was placed on the WQARF Registry in October 1998. The site is located in Gila County in and around the communities of Globe and Miami, Claypool and Wheatfields. The site includes the BHP Copper and Phelps Dodge Miami mining properties, and the drainages and underlying aquifers of Miami Wash, Bloody Tanks Wash, Russell Gulch, and Pinal Creek. The site also includes the entire floodplain of Pinal Creek from the Old Dominion Mine to the Salt River, plus those portions of the communities underlain by contaminated groundwater.

Contamination in the groundwater and in the perennial portion of Pinal Creek consists of heavy metals such as copper, cobalt, nickel, zinc, cadmium, and other contaminants such as acidity and dissolved solids. The Pinal Creek Group, which consists of BHP, Phelps Dodge and Inspiration Copper, have been conducting remedial actions since 1988 and have completed remedial investigations, risk assessments, a feasibility study and a recommended remedial action plan. They have also conducted a well replacement program for contaminated private wells.

Construction of a plant to treat contaminated groundwater along lower Pinal Creek to prevent further degradation of surface water quality by the Pinal Creek Group was completed in December 1999. Currently, the plant is treating contaminated groundwater at a rate of 3000 gallons per minute and releasing the treated water back into Pinal Creek. A cutoff wall to contain contaminated groundwater was installed in Lower Pinal Creek in December 2000. The site has a score of 97 out of a possible 120.

**Shannon Road-Rillito Creek** - This site was placed on the WQARF Registry in April 1999. The site is located in northwest Tucson and extends approximately 1/4-mile to the north and south of Rillito Creek, and is approximately bounded by Meadowbrook Park to the east and Peglar Wash Park to the west.

The site consists of a groundwater plume containing tetrachloroethylene (PCE), trichloroethylene (TCE), and dichloroethylene (DCE). The contaminant plume has impacted three community wells. One of these wells has been shut down and the other two wells have had wellhead treatment systems installed to reduce contaminants in groundwater to meet drinking water standards. The source(s) of this contamination is unknown. ADEQ is currently conducting a remedial investigation/feasibility study of the site. The site has a score of 53 out of a possible 120.

A community advisory board, which also incorporates the El Camino del Cerro site, has been established for this site.

**Silverbell Jail Annex Landfill** - This site was placed on the WQARF Registry in April 1999. The site is located in Tucson at 3200 North Silverbell Road in northwest Tucson. The site is bounded approximately by Sweetwater Drive on the north, Grant Road/Ironwood Hill Drive on the south, Interstate 10 on the east, and Silverbell Road on the west, and is comprised of approximately 40 acres. The southern portion of the landfill has been covered with soil. The northern portion of the landfill has been covered and re-vegetated and now underlies the Silverbell Golf Course.

In 1995, the City of Tucson proposed and ADEQ approved a pump and treat system to extract and clean up groundwater. A pilot study to evaluate the effectiveness of recirculation technology to replace or enhance the approved pump and treat system was implemented and concluded that the technology would not be an effective remedy for the site. The City is currently evaluating alternative methods for groundwater remediation at the landfill, which will be subject to ADEQ approval and public comment. The site has a score of 51 out of a possible 120.

**South Mesa** - This site was placed on the WQARF Registry in August 1998. The site is located in Mesa and Gilbert and is bounded approximately by Tenth Avenue to the north, the railroad south of Baseline Road to the south, Stapley Road to the east, and the railroad west of Center Street to the west.

The contaminants of concern at the site are tetrachloroethylene (PCE), chromium, nickel, and manganese in groundwater which are present in the groundwater approximately 110-130 feet below the ground surface.

Two remedial action projects at the site have significantly reduced the contamination by treating pumped groundwater and extracting vapors from the soil. The remaining contamination is being monitored quarterly. A remedial investigation/feasibility study is currently being conducted. A community advisory board has been established for this site. The site has a score of 31 out of a possible 120.

**Tonto and Cherry** - This site was placed on the WQARF Registry in June 2000. The site is located in Payson, approximately 400 feet west of the Beeline Highway and immediately north of Main Street. The site boundary is a northwest-trending oval, extending approximately 1,200 feet from the intersection of Main Street and Colcord Avenue.

Groundwater at the site has been impacted by tetrachloroethylene (PCE). PCE has been detected in five private drinking water wells at the site. The PCE concentrations in three private wells at the site exceed the Maximum Contaminant Level (MCL) of five micrograms per liter ( $\mu\text{g/l}$ ), and drinking water from these private wells poses a threat to the public health. Bottled drinking water is being provided to these private well owners as a temporary solution.

A community advisory board has been established for this site in conjunction with the Payson PCE site. The site has a score of 45 out of a possible 120.

**Tyson Wash** - This site was placed on the WQARF Registry in December 1998. The site is located in the Town of Quartzsite and has boundaries approximately 300 feet to the north of Cowell Lane to the north, 400 feet east of Washington Boulevard to the east, 300 feet south of Cowell Lane to the south, and 200 feet west of Oregon Avenue to the west.

Tetrachloroethylene (PCE) in concentrations above the Aquifer Water Quality Standard for PCE of 5 micrograms per liter is present in the groundwater approximately 40-70 feet below the ground surface. A remedial investigation/feasibility study is currently being conducted. ADEQ is supplying bottled water to owners of contaminated wells.

A community advisory board has been established for this site. The site has a score of 46 out of a possible 120.

**Vulture Mill** - This site was placed on the WQARF Registry in April 1998. The site is located just east of U.S. Route 89/93 about one mile northwest of the center of the Town of Wickenburg. The eastern boundary of the site is approximately 1/4 mile west of the Hassayampa River Channel.

The contaminants of concern at the site are lead, arsenic and manganese. The selected remedy for the site includes excavation of tailings and contaminated soil, backfilling with clean soil, and installation of a soil cover, as well as groundwater monitoring and institutional controls for installation of new wells. The final design was completed in December 2000.

A community advisory board has been established for this site. The site has a score of 65 out of a possible 120.

**West Central Phoenix (WCP) East Grand Avenue** - This site was placed on the WQARF Registry in April 1998. The site is approximately bounded by Whitton Avenue to the north, Osborn Road to the south, 29th Avenue to the east, and 30th Avenue to the west.

Primary contaminants of concern at the site include tetrachloroethylene (PCE) and trichloroethylene (TCE) in groundwater. The field investigative activities (including the installation of groundwater monitor wells, soil sampling, geophysical testing, aquifer tests, quarterly groundwater sampling, monthly water level measurements) are expected to be completed in March 2001. Negotiations are underway for a potentially responsible party (PRP) to take over the remedial investigation/feasibility study.

A community advisory board has been established for this site. The site has a score of 31 out of a possible 120.

**WCP North Canal Plume** - This site was placed on the WQARF Registry in June 1998. The approximate boundaries of this site are Indian School Road on the north, 36th Avenue on the east, Clarendon Avenue on the south, and 40th Avenue on the west.

Primary contaminants of concern at the site include tetrachloroethylene (PCE) and trichloroethylene (TCE) in groundwater.

A community advisory board has been established for this site. The site has a score of 27 out of a possible 120.

**WCP North Plume** - This site was placed on the WQARF Registry in April 1998. The site is approximately bounded by Turney Avenue to the north, Indian School Road to the south, 38th Avenue to the east, and 43rd Avenue to the west.

Primary contaminants of concern at the site include tetrachloroethylene (PCE) and trichloroethylene (TCE) in groundwater. The field investigative activities for one of the facilities at the site (including the installation of groundwater monitor wells, soil sampling, geophysical testing, aquifer tests, quarterly groundwater sampling, monthly water level measurements) were completed in December 2000. Investigations and one early response action continue at other facilities.

A notice was published in the *Arizona Republic* announcing the public comment period for a request for No Further Action (NFA) at one of the facilities in this site. ADEQ's determination on the NFA request is pending.

A community advisory board has been established for this site. The site has a score of 55 out of a possible 120.

**WCP West Grand Avenue** - This site was placed on the WQARF Registry in April 1998. The site is approximately bounded by Osborn Road to the north, Earll Drive to the south, 33rd Avenue to the east, and 35th Avenue to the west.

Primary contaminants of concern at the site include tetrachloroethylene (PCE) and trichloroethylene (TCE) in groundwater. The interim remedy soil vapor extraction (SVE) system has been shut down since May 1998. ADEQ has requested confirmation sampling of the system to determine whether the soil remediation can be closed out.

A community advisory board has been established at this site. The site has a score of 22 out of a possible 120.

**WCP West Osborn Complex** - This site was placed on the WQARF Registry in August 1998. The site is approximately bounded by the Grand Canal to the north, Pinchot Avenue to the south, 34th Drive to the east, and 39th Drive to the west.

A remedial investigation/feasibility study is currently being conducted. In April 1999, the working party installed a soil vapor extraction (SVE) system which is currently operational.

A community advisory board has been established for this site. The site has a score of 52 out of a possible 120.

**West Van Buren** - This site was placed on the WQARF Registry in April 1998. The site is approximately bounded by Van Buren Street to the north, Buckeye Road to the south, Seventh Avenue to the east, and 83rd Avenue to the west. Between Seventh Avenue and 27th Avenue, there is an extension of the plume south to Lower Buckeye Road.

Contaminants of concern at the site include tetrachloroethylene (PCE), trichloroethylene (TCE), 1,1-dichloroethylene (DCE), chromium, and benzene. The plume lies approximately 60 to 100 feet below the ground surface.

A groundwater flow model has been completed. Monthly groundwater elevation data and semi-annual groundwater concentration data are being collected from approximately 44 wells. A soil and groundwater treatment system has been constructed for the former American Linen Supply Company facility to clean up soil and groundwater contamination. A soil vapor extraction and air sparging system is currently operating at the Dolphin facility. A public notice for a No Further Action (NFA) for soils at the Reynolds Metals facility was published in the *Arizona Republic* on January 13, 2000. The NFA was finalized on February 28, 2000.

A community advisory board has been established for this site. The site has a score of 50 out of a possible 120.

**Western Avenue Plume** - This site was placed on the WQARF Registry in December 1998. The site is located in Avondale and Goodyear and is approximately bounded by Hill Drive to the north, Third Street to the east, and Litchfield Road to the west; the southern boundary proceeds on a southwesterly angle approximately 1000 feet north of State Route 85 until it reaches the western boundary just north of the entrance to the Phoenix-Goodyear Airport.

**Notices of Public Information**

The primary contaminant of concern is tetrachloroethylene (PCE) which is present in the portion of the groundwater approximately 60-110 feet below the ground surface. ADEQ installed five monitoring wells in November 2000 as part of an early response action. These wells will assist ADEQ in monitoring the on-going remedial action at the Phoenix-Goodyear Airport Superfund site involving treatment of PCE from the Western Avenue plume. In addition, ADEQ will be able to obtain information from these wells to determine the approximate mass of PCE within the Western Avenue plume and gain a better understanding of where the source is located.

A community advisory group has been established for this site in conjunction with the Phoenix-Goodyear Airport Superfund site. The site has a score of 51 out of a possible 120.
